

$$|u_n - a| = \left| \frac{3n-1}{4n+5} - \frac{3}{4} \right| = \left| \frac{3n-1 - 3(4n+5)}{16n+20} \right| \quad \text{الحل}$$

$$= \left| \frac{3n-1-12n-15}{16n+20} \right| = \left| \frac{-9n-16}{16n+20} \right| = \frac{9n+16}{16n+20}$$

$$\frac{9n+16}{16n+20} = \frac{2}{n} < \epsilon \Rightarrow \frac{n}{2} > \frac{1}{\epsilon}$$

$\Rightarrow \boxed{n > \frac{2}{\epsilon}}$

$\forall \epsilon > 0 : \exists N_\epsilon = \left\lceil \frac{2}{\epsilon} \right\rceil : \left| \frac{3n-1}{4n+5} - \frac{3}{4} \right| < \epsilon$ لجميع $n > N_\epsilon$

أثبت أن: $\lim_{n \rightarrow \infty} \frac{c}{n^p} = 0$, $c \neq 0$, $p > 0$

« p, c ثابتة معينة لا تتعلق بـ n » الحل

$$|u_n - a| = \left| \frac{c}{n^p} - 0 \right| = \left| \frac{c}{n^p} \right|$$

$$= \frac{|c|}{n^p} < \epsilon \Rightarrow n^p > \frac{|c|}{\epsilon} \Rightarrow n^p > \frac{|c|}{\epsilon}$$

$$\Rightarrow \sqrt[p]{n^p} > \sqrt[p]{\frac{|c|}{\epsilon}} \Rightarrow n > \sqrt[p]{\frac{|c|}{\epsilon}}$$

$$\forall \epsilon > 0 : \exists N_\epsilon = \left\lceil \sqrt[p]{\frac{|c|}{\epsilon}} \right\rceil : \left| \frac{c}{n^p} - 0 \right| < \epsilon$$

لجميع $n > N_\epsilon$

أثبت أن: $\lim_{n \rightarrow \infty} \frac{1+2 \cdot 10^n}{5+3 \cdot 10^n} = \frac{2}{3}$

$$\begin{aligned} \|u_n - a\| &= \left| \frac{1+2 \cdot 10^{-n}}{5+3 \cdot 10^{-n}} - \frac{2}{3} \right| = \left| \frac{3+6 \cdot 10^{-n} - 10 - 6 \cdot 10^{-n}}{15+9 \cdot 10^{-n}} \right| \quad \text{ist} \\ &= \left| \frac{-7}{15+9 \cdot 10^{-n}} \right| = \frac{7}{15+9 \cdot 10^{-n}} < \frac{9}{9 \cdot 10^{-n}} = \frac{1}{10^{-n}} < \varepsilon \end{aligned}$$

$$\Rightarrow 10^{-n} > \frac{1}{\varepsilon} \Rightarrow \log 10^{-n} > \log \frac{1}{\varepsilon} \Rightarrow n > \log \frac{1}{\varepsilon}$$

$$\forall \varepsilon > 0: \exists N_\varepsilon = \left\lceil \log \frac{1}{\varepsilon} \right\rceil: \left| \frac{1+2 \cdot 10^{-n}}{5+3 \cdot 10^{-n}} - \frac{2}{3} \right| < \varepsilon$$
